SALES \$194,022 +7.9% vs prior	UNITS 5,292,686	BASKETS 5,908	AVG BASKET \$32.84
--------------------------------------	--------------------	------------------	-----------------------

Executive summary

- The store × commodity slice moved -377.3 in sales versus the comparison window.
- 329 contributed +1,368.7 of listed sales change.
- SOFT DRINKS contributed +1,599.1 of listed sales change.
- Observed average line sales are +71.3% versus A.

Decision charts

Key business drivers

FINDING	DRIVER	IMPACT	SCORE
Store 429 × COUPON/MISC ITEMS concentrates a high-impact decline	Cross-dimensional store and commodity movement	10% of the absolute scanned store × commodity movement.	0.48
Store 329 is a major positive contributor	Store contribution	13% of the absolute listed store movement.	0.49
Commodity SOFT DRINKS is a major positive contributor	Commodity contribution	17% of the absolute listed commodity movement.	0.54
0 is associated with stronger line sales	Merchandising association	The association identifies a candidate merchandising opportunity, not a causal effect.	0.97
Store 367 deviates materially from peer-week sales	Store-level anomaly	The deviation warrants targeted diagnostic follow-up.	0.86
Campaign 18 has the highest observed household redemption rate	Observed campaign-to-redemption funnel	This identifies a campaign pattern for follow-up; it does not estimate incremental campaign lift.	0.85

Opportunities

- Observed average line sales are +71.3% versus A.
- Latest store-week sales have a z-score of +3.29 against the current peer-week distribution.
- Latest store-week sales have a z-score of +2.32 against the current peer-week distribution.

Priority actions

- P0** Inspect product, promotion and availability proxies for store 429 within COUPON/MISC ITEMS before applying a broad intervention.
Target: store=429, commodity=COUPON/MISC ITEMS
 10% of the absolute scanned store × commodity movement.

P1 **Validate the drivers behind 329 and test whether the positive pattern is repeatable.**

Target: store=329

13% of the absolute listed store movement.

Monitor: Sales / units / conversion proxy / availability proxy

P2 **Validate the drivers behind SOFT DRINKS and test whether the positive pattern is repeatable.**

Target: commodity=SOFT DRINKS

17% of the absolute listed commodity movement.

Monitor: Sales / units / conversion proxy / availability proxy

P2 **Run a matched-store/product analysis before scaling the display change.**

Target: display=0

The association identifies a candidate merchandising opportunity, not a causal effect.

Monitor: Sales / units / conversion proxy / availability proxy

P2 **Inspect product and promotion mix for store 367.**

Target: store=367

The deviation warrants targeted diagnostic follow-up.

Monitor: Sales / units / conversion proxy / availability proxy

Monitoring

- Track the highest-impact negative contributors in the next analysis window.
 - Validate merchandising associations with matched store/product comparisons before rollout.
 - Re-run the same benchmark after material model, planner, or skill changes.
-
